(54) Title: METHOD AND SYSTEM FOR AUGMENTING AN AUDIO SIGNAL

(57) Abstract: A system and method is described in
which a multimedia story is rendered to a consumer in
dependence on features extracted from an audio sig-
nal representing for example a musical selection of the
consumer. Features such as key changes and tempo
of the music selection are related to dramatic param-
eters defined by and associated with story arcs, nar-
rative story rules and film or story structure. In one
example a selection of a few music tracks provides in-
put audio signals (602) from which musical features
are extracted(604), following which a dramatic param-
eter list and timeline are generated (606). Media frag-
ments are then obtained (608), the fragments having
story content associated with the dramatic parameters,
and the fragments output (610) with the music selec-
tion.
